

OneRep

Training and nutrition One shared picture

A working fitness app with an optional
AI Coach built around the user's own log.

Investor introduction / September 2026

Product image: demonstration account, captured 3 August 2026. UI has since evolved.

The first customer

INITIAL CUSTOMER HYPOTHESIS

**People who already lift
and track what they eat.**

They have a routine. The opportunity is to make daily logging and weekly decisions easier to keep up.

The daily task

Keep workouts and food in one usable record.

The weekly decision

Understand what changed before adjusting training or nutrition.

A working product across the daily routine

Training

Routines and workout logs

Nutrition

Food logging and macros

Progress

Trends and measurements

Actual OneRep demo-account captures from 3 August 2026. Illustrative account values, not customer outcomes.

Coach works inside the log

Context from the account

Coach can use training, food and goals rather than asking users to reconstruct their history.

Suggestions that become entries

Supported actions can create workouts or food records through an approval flow.

User control

AI sharing is opt-in. Core tracking works without Coach, and users can export their data.

Implemented product capabilities. Demo screenshot: 3 August 2026. No claim of clinical effectiveness or improved outcomes.

A large category, a narrow starting point

81 million

US fitness-facility members in 2025

HFA also reports that free weights led equipment usage growth since 2021.

OneRep's starting audience

Self-directed adults who combine strength training with regular food tracking.

What still needs proof

How many of these users will switch, stay active and pay for Coach.

Competition is already converging

PRODUCT

EXISTING OFFER

IMPLICATION FOR ONEREP

Hevy

Workout logging, routines and a fitness community.

Workout tracking alone must meet a high usability bar.

MacroFactor

Nutrition and workout apps, with a combined subscription.

Combining training and food is already a competitive category.

OneRep

Free core tracking, a shared account and optional AI actions.

The proposed advantage is less logging friction and more useful context.

Retention and useful coaching will determine whether users switch.

Sources: Hevy official site; MacroFactor Workouts and pricing pages; OneRep product and code. Competitive position remains a hypothesis.

Free tracking, optional paid Coach

CORE

€0

Workout, nutrition and progress tracking.

10 AI requests per month.

COACH / PUBLISHED WEB PRICE

€4.99

per month

500 AI requests per month.

Recurring subscription.

At 1,000 paying subscribers: €4,990 in monthly gross billings.

Illustrative arithmetic, not a forecast. Before taxes, fees, AI, hosting and support costs. Published web offer; regional store prices may vary.

A working product, an early commercial stage

0

paying subscribers

As of 20 September 2026

Product available

Web app available. iOS in TestFlight beta, with the App Store release still pending.

Next proof points

Reliable checkout, repeat weekly use and the first paid renewals.

A focused distribution plan

PROPOSED TESTS

**Start with small cohorts.
Learn before buying reach.**

Direct recruiting

Invite lifters through relevant communities and coach-led introductions. Offer hands-on onboarding.

Search and useful content

Use the existing exercise library and practical training content to reach people with a specific need.

The milestones that justify the next stage

PROPOSED PRIORITIES FOR INVESTMENT

Reliable purchase and onboarding

Complete subscription purchase validation and the iOS release. Make the first workout and food log straightforward.

Repeat paid usage

Reach first paid renewals and measure AI cost per paying subscriber alongside support and platform fees.

A retained initial cohort

Measure who returns to both training and nutrition after four weeks, and learn why others stop.

A repeatable acquisition route

Compare cohort quality by channel before committing to a larger acquisition budget.

OneRep

A working product.

Paid demand is the next proof.

Seeking investor conversations about the path
to retained users and repeat paid subscriptions.
